OZONE ONE

Ozone One

Ozone One is a stand-alone ozone generator designed to be retro-fitted to existing water management systems.

Harness the power of ozone as the frontline of defence against harmful pathogens. The powerful ozone generator does the "heavy lifting" but all ozone systems need to be paired with a residual sanitiser. A safe residual can be provided by your choice of a mineral water system, a saltwater chlorinator or a chemical dosing system.

The true power of ozone is that it significantly reduces chlorine demand, making the entire system safer and more efficient.

Ozone One is suitable for swimming pools and spas of all sizes and comes in your choice of colour - black or grey - to match your other equipment

- 0 Powerful ozone generator
- 3 3 Year Warranty

The Q-foil

The Q-foil is an innovative injection system for ozone and replaces bulky, inefficient venturi manifold systems. Developed by Pool Controls, the Q-foil is based on the same principles as a hydrofoil and uses pressure differential to draw ozone into the waterflow. It is simple to instal and requires minimal maintenance.

Proudly Manufactured in Australia

Pool Controls is 100% Australian owned and all products are proudly manufactured in Australia.

OZONE ONE

Ozone One - Salt & Mineral

Take your water quality to a new level with Ozone One.

The Ozone One is a simple way to upgrade an existing sanitation system. While it is designed to work seamlessly with Pool Controls' products, the Ozone One can also be used to upgrade systems manufactured by others.

Pool Controls specialises in the manufacture of sanitation systems for swimming pools and spas. We have a broad range of products to suit your application – whether it is a large outdoor swimming pool or a heated indoor spa. Pool Controls endeavours to ensure all aspects of water chemistry are addressed, which is why fully-integrated pH control is available right across the range.

Mineral systems and salt water systems that operate at extra-low concentrations of salt are a great way to enhance your bathing experience while protecting the environment – and your budget.

Incorporating an Ozone One into your system takes water management to a new level – and maintaining perfectly balanced water has never been easier.
